

STEEL TRACKS

The F-Series Steel Track from Loegering.

Improve the versatility of your skid steer loader by installing a set of Loegering steel tracks. The F-Series combines the increased flotation and powerful traction you need to power through the widest range of applications and materials.

Loegering's F - Series are built to last. Each component is individually hardened prior to assembly to increase the durability of the entire system. The hammer-forged steel pads are not only the most wear resistant, they feature beveled edges to minimize ground disturbance. In addition to durable, the inside of each pad features a V-shape design to increase skid steer control and allow material to clean out. The F-Series offer tire protection from debris and increase the number of contact points to the ground, giving you a smoother ride.

Each component is secured with a threaded "Dura-Pin". These D-shaped pins are engineered to minimize spinning, which will maximize the life of your tracks. In addition, Loegering's Dura-Pins are designed for easy replacement in the field minimizing downtime and simplifying necessary track adjustments.

OVER 30 YEARS OF STEEL TRACK EXPERIENCE

- Hammer-forged steel pads extend track life.
- V-shape pad design is self-cleaning.
- Double pivot design provides a smoother ride.
- Increased contact between pad and ground maximizes flotation.
- Provides tire protection in adverse conditions.

F-SERIES

over-the-tire steel tracks.

"I'm very impressed with how long my Loegering steel tracks have lasted. This longevity has made me more profitable."

— Phil, Minnesota USA

YOU DESERVE THE BEST.

- ✿ Be more productive.
- ✿ Extend your work season.
- ✿ Improve your profitability.
- ✿ Gain the versatility to work in all conditions.

IMPROVE THE PRODUCTIVITY OF YOUR SKID STEER.

Installation made easy.

Loegering steel tracks attach quickly and easily with our customized installation tool. This tool offers the flexibility of removing and reinstalling your steel tracks in under 30 minutes.
